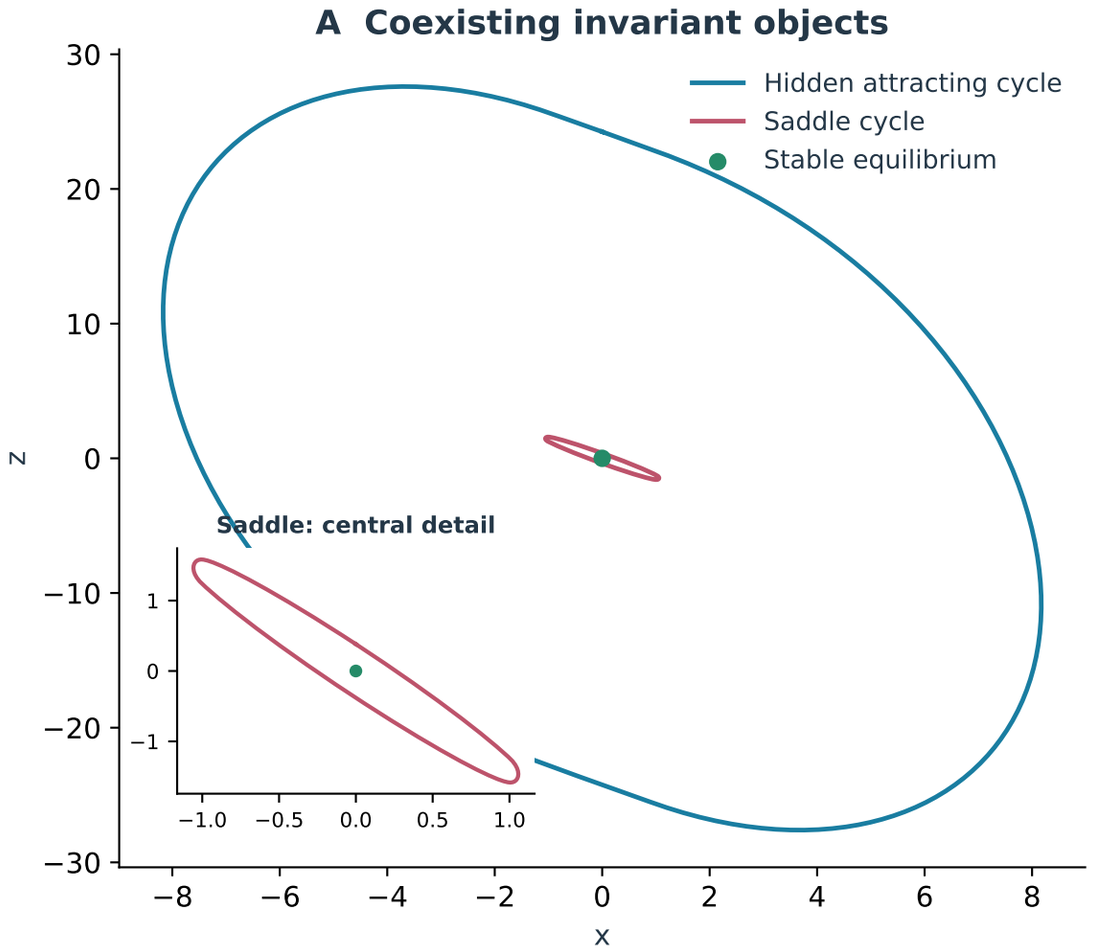
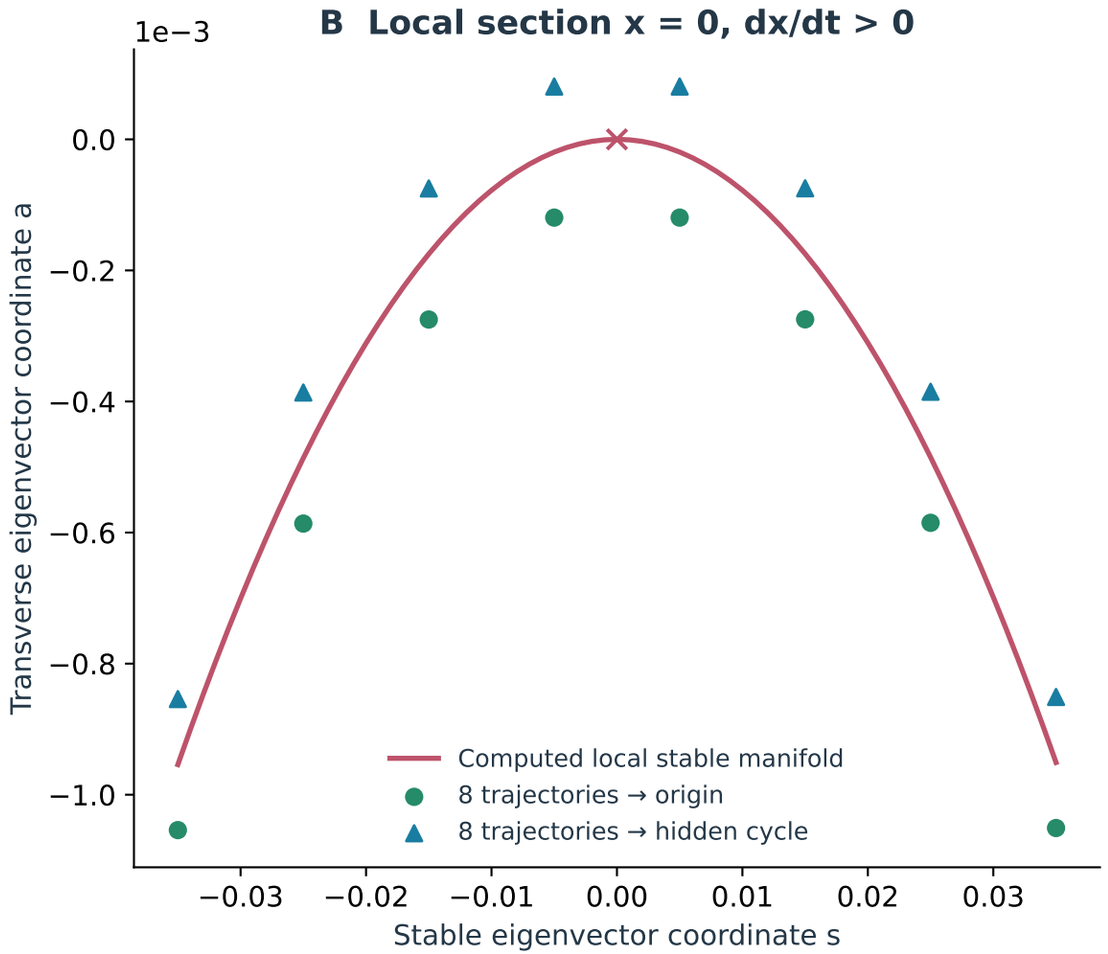
# A saddle between two attracting motions

$\alpha = 8.4 \quad \beta = 12 \quad m_0 = -0.95 \quad m_1 = -0.05 \quad \gamma = 0$





Cycle existence and stability: interval certificates at 80 and 100 digits.
Saddle multipliers: 3.35201949 and 0.0000231261. Two attractors are exhibited; the saddle is not an attractor.
The separator curve and 16 two-sided outcomes are numerical. The complete basin boundary is not certified.
