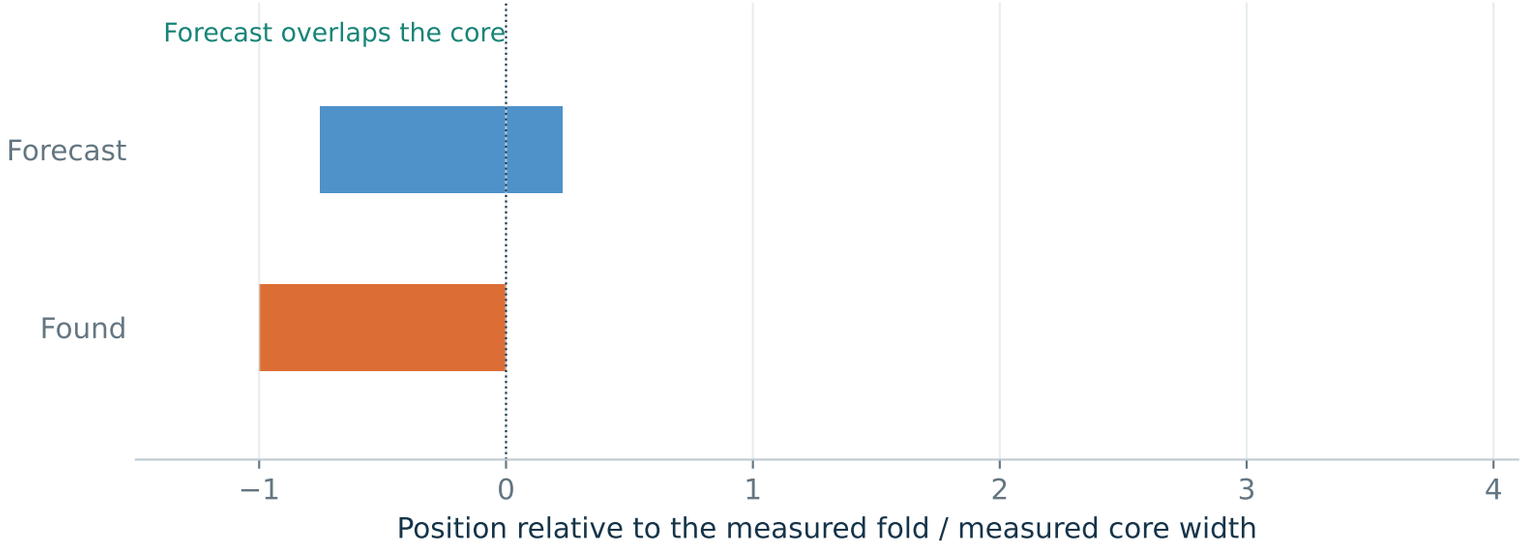
# Predicted first. Searched second. Compared at the true scale.

## 75 peaks per complete cycle

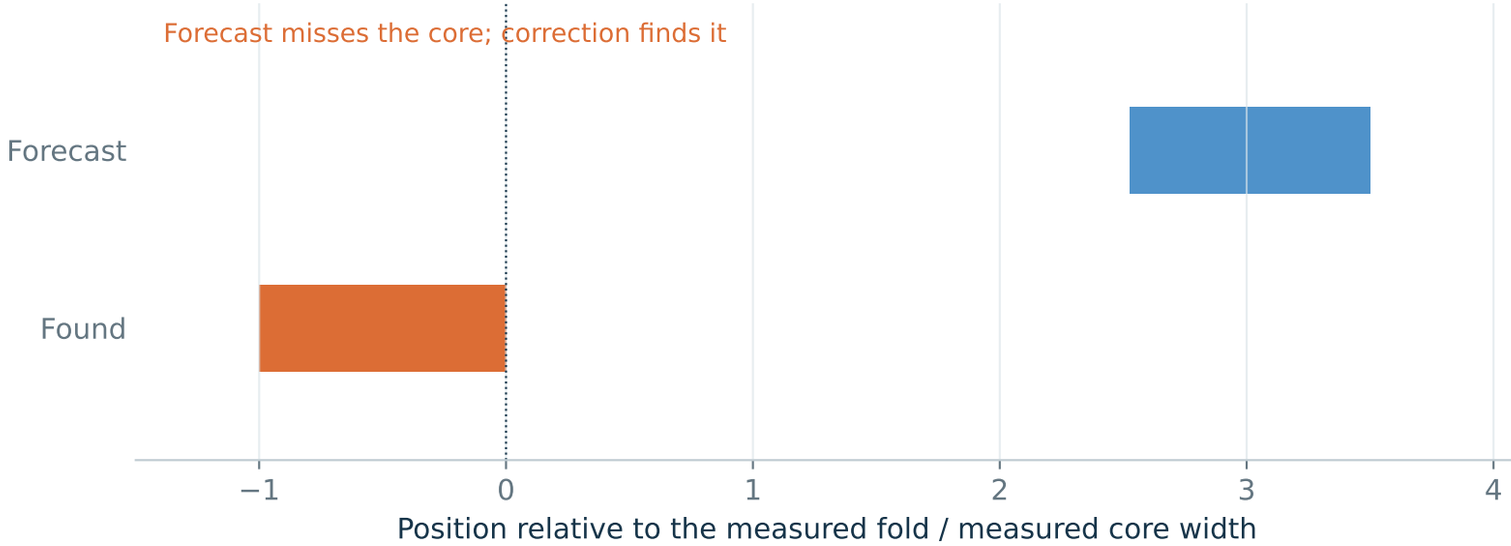


WIDTH
Predicted 4.3135e-09
Measured 4.3949e-09
Difference 1.89% of forecast

FOLD POSITION
Error: 0.226 measured widths
Beta = 14.30635031171668

PERIOD
Predicted 162.123792 | Measured 162.123850

## 85 peaks per complete cycle



WIDTH
Predicted 5.8586e-10
Measured 6.0170e-10
Difference 2.70% of forecast

FOLD POSITION
Error: 3.501 measured widths
Beta = 14.30635585314909

PERIOD
Predicted 183.718487 | Measured 183.718590

**Forecast locked in Git: 0fc47ea | Calibration: the previously known 15–65-peak layers**

Search: prescribed itinerary + orbit closing, followed by 55/75-digit comparison and independent full-field integrations.

The blue intervals are point forecasts, not confidence bands. Their engineering location gate was wider than either new core.
