The layers represent different attracting motions

Blue: five peaks. Rose: seven peaks. Dashed traces are the inversion partners of solid asymmetric traces.

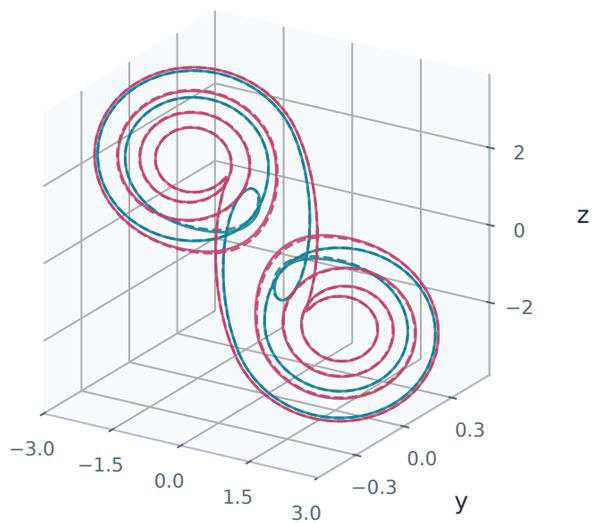

2 attracting cycles
Two symmetric cycles

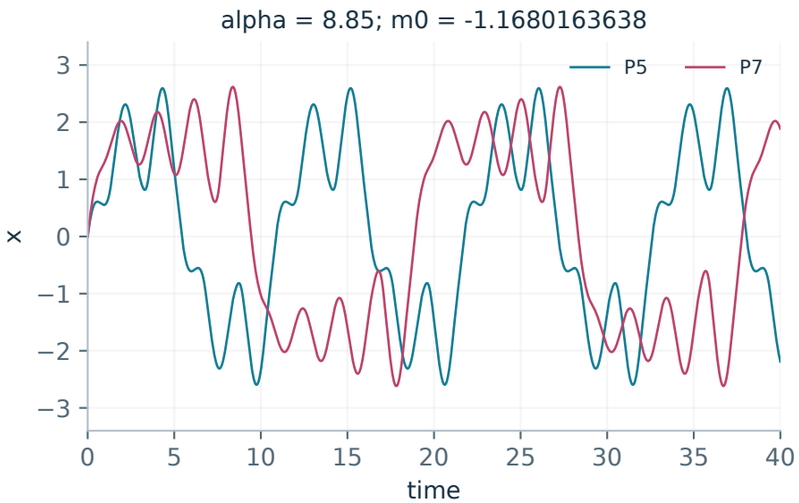

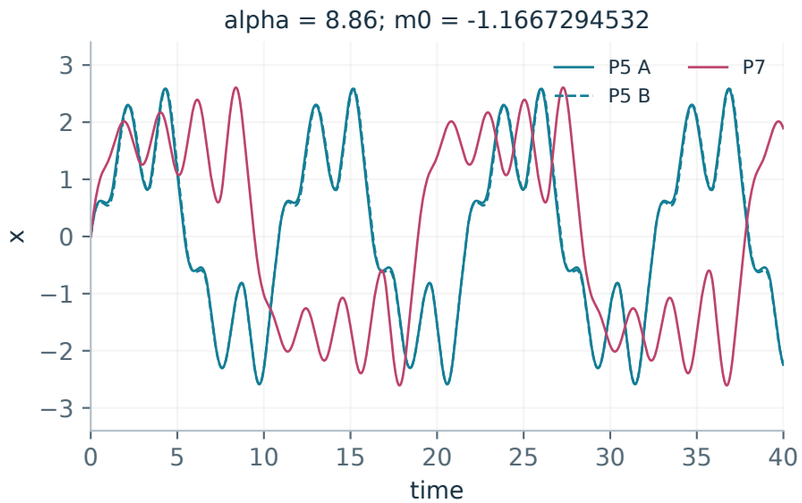

3 attracting cycles
One symmetric cycle + one pair

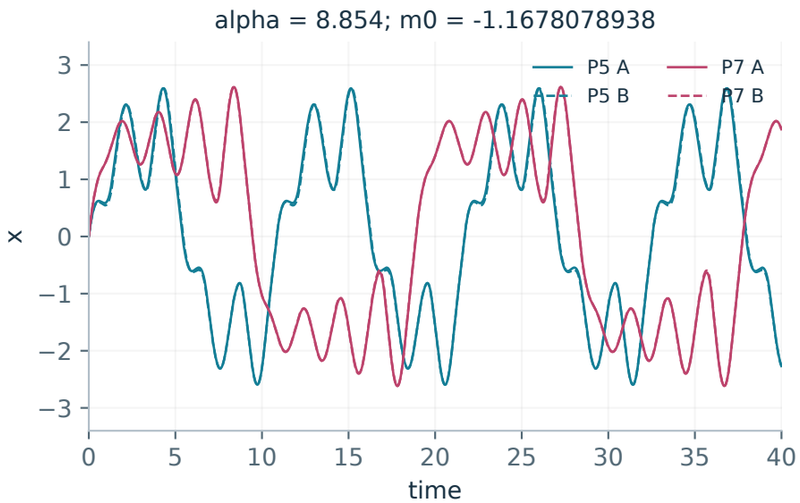

4 attracting cycles
Two asymmetric pairs

Within each column all orbits use identical parameters. beta = 100/7; m1 = -0.7521.
Every displayed orbit passes independent closure and stability checks. Counts are lower bounds; other families are not excluded.
