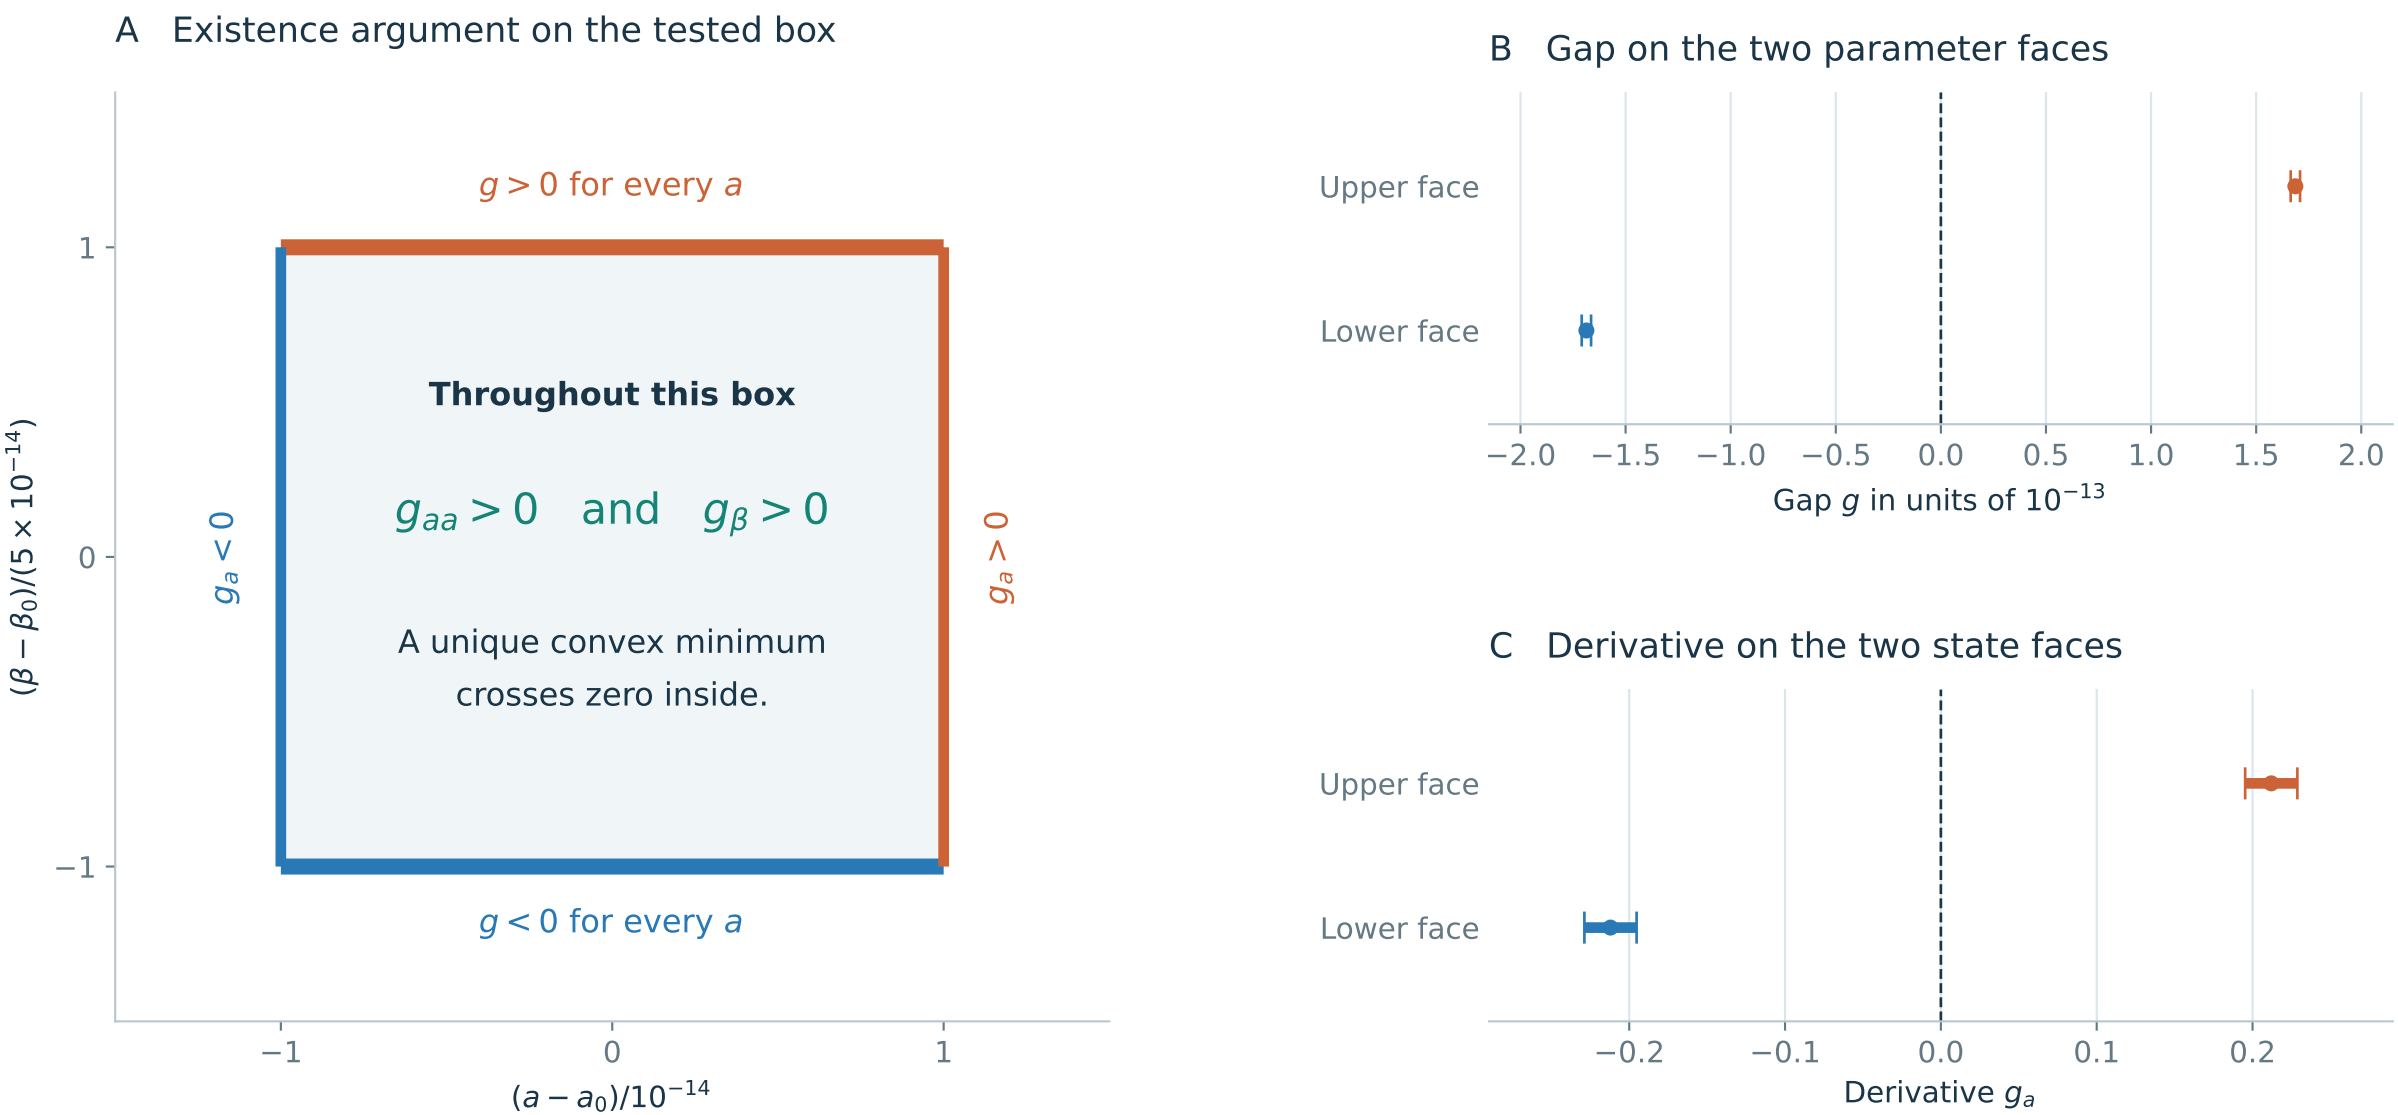
A tangency forced by interval signs

The bounds include every allowed exact stable and unstable graph.



$a_0 \approx -7.4583788929913551 \times 10^{-8}$ $\beta_0 \approx 14.3063590999614598$

Bars enclose the entire corresponding face, not statistical errors. The box diagram does not assign an uncomputed point location.
