Short-pulse law: $a\tau = A_* + 0.0535732\,\tau^2 + O(\tau^4)$
A The linear duration term cancels
1e−4
Prediction $c\tau^2$; no pulse-data fit
Integrated pulse thresholds
Excess area $I_*(\tau) - A_*$
Squared pulse duration $\tau^2$
B Error is small but visible
Error relative to the area correction (%)
Pulse duration $\tau$
