Continued families in the two slope volumes

6,713 checked cross-sections / 6,724 requested · separate fold, symmetry edge and attracting core

(m_0, m_1, α); $\beta = 100/7$

(m_0, m_1, β); $\alpha = 9$

P5: five peaks

P7: seven peaks, 8 crossings

Same P7 family, 12 crossings

P7 contact curve

Surfaces connect checked core midpoints at their actual coordinates; stability widths are shown separately.
All P7 nodes are recovered. Eleven P5 nodes remain unresolved. Facets are interpolation, not an existence proof.
